

North Carolina Council of Teachers of Mathematics — Case Study

There are times when you don't need a completely new graphic design for your website right away. In the case of the North Carolina Council of Teachers of Mathematics, Stratos needed to migrate and optimize a website designed by a third party. NCCTM needed to migrate their existing site to a new hosting location and needed their existing Adobe ColdFusion™ application optimized for reliability, while also adding new features. Often times it can be quite challenging to analyze and optimize existing applications, however not only did NCCTM step up to the plate with clear, concise and prompt communications; in addition, everyone involved worked together as an orchestrated team to seamlessly move the site and support the needs of the NCCTM's 11,000+ member group.

Let Stratos show you how to harness the power of Adobe ColdFusion™ to develop online applications that are developed more quickly and have more scalability than ever before! [Learn more about Adobe ColdFusion™](#)

Site Features:

- Project management/Consultation
- Migration/Restoration of existing SQL databases
- Troubleshooting, testing and optimization of existing ColdFusion™ applications
- Migration and integration of security environments for payment processing
- Redesign of Paypal payment processing structure
- Integration of .ASP existing application module
- Setup/coordination of content management system
- Optimization/customization of reporting module
- Setup/configuration of email management application
